

SCRIBE INFOSQUOTA

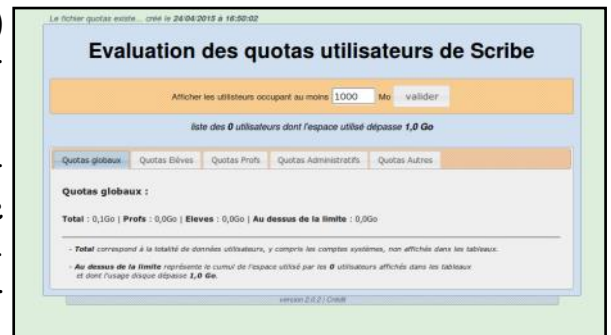

- Comment gérer les quotas des utilisateurs ?
- Comment est informé les utilisateurs ?
- Comment paramétrer 'Infosquota' ?

1

Présentation :

Il est possible d'ajouter au module utilisé (Scribe) des applications web dont l'installation est laissée à votre initiative.

Infosquota (applications web) est un outil qui permet de mettre en place les quotas de manière très souple et très pédagogique. Chaque utilisateur apprend à gérer son quota en suivant une information claire sur son évolution.

Grâce à son outil de visualisation, **Infosquota** permet de retrouver les fichiers que les utilisateurs ont ventilé hors de leur lecteur partagé personnel. En effet les fichiers dispersés dans d'autres volumes sont comptabilisés dans le quota de l'utilisateur (dossiers personnels, partagés équipe pédagogique, classe, groupes, etc.).

Cet outil vient en complément de la visualisation des quotas disponible dans la console d'administration de Scribe.

2

Informations coté utilisateurs :

Une fois l'application installée et paramétrée, l'utilisateur aura les différentes informations à l'ouverture de sa session ... voici les différents cas :

➔ Principe du fonctionnement général des quotas :

Les quotas sont composés d'une limite douce (soft) et d'une limite dure (hard). **La limite dure vaut le double de la limite douce.**

Les règles suivantes s'appliquent à l'utilisateur :

- il ne peut pas dépasser la limite dure.
- il peut dépasser la limite douce pendant 7 jours.
- passé ce délai, seule la limite douce est prise en compte et il est obligé de supprimer des données afin de repasser en dessous de celle-ci.

A partir de là, le processus douce/dure reprend et l'utilisateur peut à nouveau dépasser la limite douce pour une durée maximale de 7 jours.

Dans l'EAD, c'est la limite douce qui est indiquée.

Si la limite dure est atteinte ou si cela fait plus de 7 jours que la limite douce est dépassée, l'utilisateur est obligé de repasser en dessous de la limite douce car les logiciels risquent de ne plus fonctionner.

1er cas (pas de quota) :

Vous n'avez défini aucun quota (i.e. : quota = 0) pour l'utilisateur. Il n'y a donc aucun message pour l'utilisateur.

2ème cas (quota défini) :

L'utilisateur occupe un espace inférieur à 90 % de la limite douce.

A la connexion, un message d'information avec quota et occupation disque actuelle s'affiche pendant 5 secondes.

3ème cas (quota défini) :

L'utilisateur occupe un espace supérieur à 90 % de la limite douce mais inférieur à la limite dure.

A la connexion, le message d'avertissement préventif suivant s'affiche avec clic obligatoire sur OK.

L'utilisateur sait ainsi qu'il approche de la limite douce sans pour autant être obligé de supprimer des fichiers.

4ème cas (quota défini) :

L'utilisateur dépasse la limite douce.

Un message plus ferme s'affiche.

L'utilisateur est obligé de cliquer sur OK pour le faire disparaître. Il a donc 7 jours pour repasser en dessous de la limite douce. S'il ne le fait pas, il ne pourra plus rien enregistrer tant qu'il ne sera pas repassé en dessous de la limite douce.

En dessous d'une durée restante de 48h, le message devient :

Délai restant : 34h 20min → DEPECHEZ-VOUS !!!

Dans l'environnement Scribe, les utilisateurs ne savent pas facilement quel espace disque ils occupent. Lorsque des quotas sont appliqués (ce qui est très fortement conseillé), leur dépassement entraîne des blocages : impossibilité d'enregistrer des documents de travail, erreurs de lancement de certains logiciels (Firefox par exemple, qui écrit des données à son ouverture).

le logiciel Infosquota l'informe de la capacité de stockage dont il dispose ainsi que de l'espace qu'il occupe. En cas de dépassement, il l'informe du délai dont il dispose pour revenir à une situation normale.

Infosquota a été développé par Olivier Hacquard et Jérôme Labriet (Académie de Besançon) en étroite collaboration avec Bruno Debeve (Académie de Bordeaux), Frédéric Poyet (Académie de Dijon) et Pierre Mariot (Académie de Besançon) dans le cadre du projet EOLE.

Installation du logiciel :

Suivre le lien sur l'image →

Infosquota s'installe manuellement.

La mise à jour des fichiers s'effectue de façon hebdomadaire.

Sur le serveur Scribe (nécessite d'être root)

- Créer dans `/home/netlogon` un dossier nommé `infosquota`
- Déposer dans ce dossier les 2 fichiers `infosquota.exe` et `infosq`
- Placer le fichier nommé `infosquota` sur le serveur Scribe dans `/`
Si nécessaire, redémarrer le service cron (via l'EAD ou avec `/etc/cron.d`)

NB : Cette tâche peut être effectuée manuellement, en créant

```
*/10 * * * * root /usr/sbin/repquota /home | awk '
{
    print "INFOQUOTA: " $1 " " $2 " " $3 " " $4 " " $5 " " $6 " " $7 " " $8 " " $9 " " $10 " " $11 " " $12 " " $13 " " $14 " " $15 " " $16 " " $17 " " $18 " " $19 " " $20 " " $21 " " $22 " " $23 " " ```

A°) En connexion admin, ouvrir le répertoire netlogon :

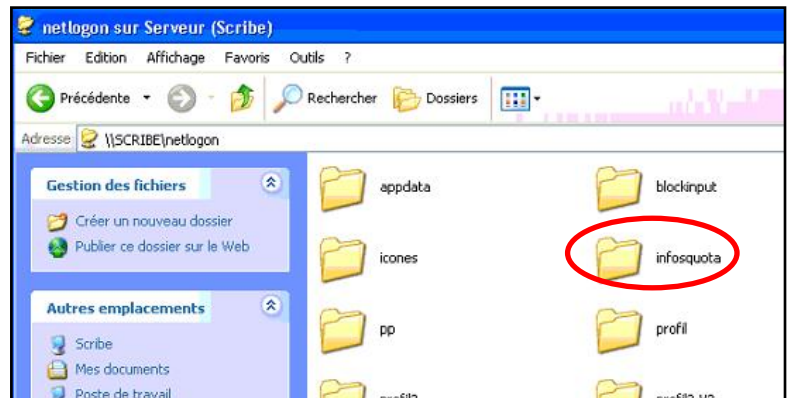

- Soit avec un raccourci déjà placé sur le bureau.
- Soit en vous connectant directement \\SCRIBE\netlogon ...

B°) Ouvrir ensuite le dossier :

" infosquota "

C°) Ouvrir ensuite le fichier :

" infosquota.ini "

Ce fichier *infosquota.ini* peut être ouvert avec le BlocNote mais vous donnera un affichage peu facile à lire. Il est fortement conseillé d'utiliser un éditeur de texte amélioré type Notepad++ qui vous permettra d'avoir une lecture beaucoup plus facile.

D°) Vous obtenez le fichier suivant qui vous permet de configurer les différents paramètres de l'affichage des messages aux utilisateurs :

```
*****
: Configuration pour infosquota - Bruno Debeve - Oct.2011
: version 4.0 - 25.11.2011
: A placer dans le même répertoire que infosquota
:
: Plus d'infos : http://www.debeve.net/infosquota
: *****

[ini]
quota_pc = 90
: définit, en %, le seuil d'alerte en prévention pour l'utilisateur (entre 1 et 100) (3ème cas de la page N° 2
: par défaut : 90

temps_affichage = 5
: durée d'affichage (en s) de la fenêtre lorsqu'il n'y a pas dépassement ou en cas d'alerte (entre 1s et 60s
N° 2 de ce document)
: par défaut : 5

aff_stockage = 1
: affiche ou non (1 ou 0) l'espace utilisé (en temps normal) par des utilisateurs concernés par un quota (2
2 de ce document)
: par défaut : 1

aff_quota 0 = 1
```
